Lab 03 – Usage Detail Stream

Overview

This is another stream example composed of a Source, Processor, and Sink.

Please use the lab details here as the instructions for this lab.

You can ignore the first part as the source code already exists in the repository

1. **cd scdf-workshop/labs/standalone-stream-kafka**

2. Build the application by running the following:

```
mvn clean install com.google.cloud.tools:jib-maven-plugin:dockerBuild -DskipTests
```

3. Have a go at figuring out how configure the Applications and Stream definitions (answers are provided)
